### **Project Roosevelt – Contamination and Hazardous Building Materials Advice**

Dear Dominic,

#### **1. Introduction**

JBS&G (NSW & WA) Pty Ltd (JBS&G) was requested by Mirvac Projects Pty Ltd (NSW) (Mirvac), the client, and Coombes Property Group Pty Ltd, to undertake a review of the contamination and hazardous buildings material status of the property located at 505 George Street, Sydney, NSW 2000 (the site). The site has an area of approximately 4308 m<sup>2</sup> and is legally described as Lot 1 on Deposited Plan 573250. The site location is shown in **Attachment 2, Figure 1** and the site layout is shown in **Attachment 2, Figure 2**.

#### **2. Objective**

The objective of this investigation is to provide an opinion on the suitability of the site for the proposed mixed-use from a contamination perspective, for inclusion in a planning proposal to the City of Sydney for a mixed-use development including residential and commercial (retail) uses.

#### **3. Scope of Works**

The scope of works for as part of this engagement were:

- review and assessment of the four supplied previous contamination and hazardous building material reports detailed in **Section 6**;
- review of current NSW EPA notices and listings on or adjacent to the site;
- conduct a site walk-by; and
- prepare a letter report, presenting the findings of the engagement.

#### **4. Summary Site Details**

The site details are summarised in **Table 4.1** below:

**Table 4.1 Summary Site Details**

Lot/DP	Lot 1 on DP 573250
Address	505 George Street, Sydney, NSW 2000
Local Government Authority	City of Sydney
Site Zoning	B8 Metropolitan Centre
Current Use	Commercial
Proposed Use	Multi-unit residential and commercial (retail)
Site Area	Approximately 4308 m <sup>2</sup>
MGA Coordinates (Zone 56) of the approximate centre of site	E:334075 N:6250242

A site walk-by was conducted by one of JBS&G's trained and experienced field scientists on the 3<sup>rd</sup> April 2014. The site was confirmed to appear as described in previous environmental assessments and comprised of a 6 level cinema complex and commercial shops including food outlets, learning centre and food outlets. This building occupies the entire site with no accessible soils. A basement consisting of retail shops and a car park was identified by Hyder (2009<sup>1</sup>).

A battery room on level 1 with approximately 50 Enerlyte stationary batteries for back-up power generation was identified in Hyder (2009). No underground storage tanks for back-up diesel powered generators were identified in the basement during the previous investigation (Hyder 2009).

## 5. Review of Site History

A summary site history from aerial photograph reviews and Land Title searches provided in Hyder (2009) is presented below.

Hyder (2009) identified a single building in the 1930's on the site. Additional building were noted in the 1950's with additional extensions in 1970. Anecdotal evidence suggested that the site was a production theatre with costume design and possibly fabric manufacturing.

It is believed that former 'Sydney Trocadero' was the main building identified<sup>2</sup>. This large dance and concert hall was operational between 1936 and 1971 on the site. Given this new information, it is considered unlikely that any large-scale fabric manufacturing occurred on the site.

In the mid 1970's the site was re-developed into a picture theatre (cinema). The entire site was covered by a single building. It is anticipated the basement was excavated during this substantial redevelopment of the site. As such, any potential contamination from the limited fabric manufacturing or previous site uses were likely excavated during the construction of the basement. All works since this appear to have been renovations placing additional levels on top of the current structure layout.

It is noted that no industries listed in Appendix A: Industries and Chemicals Used in DUAP (1998<sup>3</sup>) are evident in the site history.

## 6. Review of Previous Environmental and Hazardous Material Reports

Four documents were supplied by Mirvac for review as a part of this assessment.

<sup>1</sup> *George Street Cinema Complex - Phase 1 Environmental Assessment*. Hyder Consulting Pty Ltd, July 2009 (Hyder 2009).

<sup>2</sup> <http://www.dictionaryofsydney.org/entry/trocadero>. Accessed on 4<sup>th</sup> April 2014.

<sup>3</sup> *Managing Land Contamination: Planning Guidelines, SEPP 55-Remediation of Land*. Depart of Urban Affairs and Planning, 1998 (DUAP 1998).

## **6.1 George Street Cinema Complex - Phase 1 Environmental Assessment. Hyder Consulting Pty Ltd, July 2009 (Hyder 2009)**

Hyder Consulting Pty Ltd (Hyder) conducted a Phase 1 Environmental Site Assessment of the site in July 2009. This comprised a desktop investigation and a site investigation of accessible areas of the site with no intrusive soil, groundwater or emissions sampling.

The objective of this assessment was to investigate the potential for contaminated land as a result of current and historic site activities. Hyder (2009) conducted a desktop review of historical site aerials, land title searches, surrounding land-use, council records, NSW EPA (DECC) records and the environmental setting of the site.

Hyder (2009) concluded the following:

- it was unlikely that significant soil or groundwater contamination be present on site;
- historical land uses, such as possible fabric manufacturing, had the potential to contaminate soils and/or groundwater underlying the site;
- minor amount of chemicals used in day to day maintenance of the commercial building were not considered to pose a significant risk;
- asbestos containing materials (ACM) did not pose a health risk if left undisturbed. Hyder (2009) recommended that if disturbance was to occur, as during site re-development, the ACM should be removed prior to or as part of these works; and,
- a Phase 2 ESA was not required for the site. However, if the site was to be re-developed to a more sensitive land-use, then a Phase 2 ESA or investigations may be required. Additionally, if the site was to be re-developed with works requiring excess soil removal, soil quality testing of excess soils would be required prior to off-site disposal.

## **6.2 Asbestos Material Survey Report – Greater Union Cinema Complex, George Street, Sydney. Environmental Risk Management Australia, July 2006 (ERMA 2006)**

Environmental Risk Management Australia (ERMA) conducted an asbestos materials survey report for the site in July 2006. This comprised a non-destructive site inspection limited to asbestos containing materials in accessible areas.

ACM was reported in 21 locations with 15 of those comprising “Paddie fire control” doors. All ACM was reported as either priority rating P3 (low risk requiring maintenance) or priority rating P4 (negligible risk under present conditions). ACM onsite was therefore considered to be in good condition with ongoing maintenance required.

## **6.3 Asbestos Materials Survey – George Street Cinemas, 505-523 George Street, Sydney, NSW 2000. Hibbs and Associates Pty Ltd, August 2009 (Hibbs 2009)**

Hibbs and Associates Pty Ltd (Hibbs) conducted an asbestos materials survey for the northern building of the site in August 2009. This comprised a review of the ERMA (2006) and a site investigation of the northern most building of the cinema complex.

Five different ACM products were reported across 31 locations in the northern building. All ACM was reported as either priority rating P3 (low risk requiring maintenance) or priority rating P4 (negligible risk under present conditions). Synthetic mineral fibres were reported in at least five locations in the northern building.

Hibbs (2009) recommended that the asbestos materials should be removed prior to demolition or refurbishment works that would potentially disturb the asbestos materials in accordance with the latest regulatory requirements for the removal of asbestos.

## **6.4 Airsafe Test Report, Project: 505 George Street, Sydney, Job Number: 14930, December 2009**

This test report refers to a single sample of compressed fibrous cement sheeting from an external column behind tiles. The exact location of this sample cannot be determined by JBS&G. No asbestos was detected in the sample.

## **7. Assessment of Previous Environmental Reports**

The previous environmental assessments are considered to be adequate for their proposed scopes at the current stage of the development and planning process. The site and adjacent properties appear to have remained as commercial facilities since the completion of the four environmental reports reviewed in **Section 6**. As such, it is considered that the findings of the four reports remain broadly valid in terms of assessing the potential contamination and hazardous materials condition of the site. However, on the basis of the information presented in the contamination report (Hyder 2009), JBS&G is of the opinion that no further assessment of contamination is warranted, as no Areas of Environmental Concern (AECs) or Contaminants of Potential Concern (COPCs) are likely to remain following the redevelopment of the site, including the basement construction in the 1970's.

## **8. Review of NSW EPA Records**

A search of the NSW EPA public register under the Protection of the Environment Operations Act 1997 was undertaken on the 3<sup>rd</sup> April 2014 (**Attachment 3**). The search identified that, for the site there were:

- no prevention, clean-up or prohibition notices; and
- no transfer, variation, suspension, surrender or revocation of an environment protection licence (EPL).

A search was undertaken of the NSW EPA public contaminated land register on the 3<sup>rd</sup> April 2014 (**Attachment 3**). The search identified that there were no notices issued for the site, or for nearby properties under the Contaminated Land Management Act 1997 (CLM Act).

In addition, a search of the NSW EPA "List of NSW Contaminated Sites Notified to EPA" on the 3<sup>rd</sup> April 2014 identified that the site or nearby properties have not been notified to NSW EPA under Section 60 of the Contaminated Land Management Act 1997 (CLM Act) (**Attachment 3**).

## **9. Conclusions**

Based on the findings of this investigation and subsequent to the limitations in **Attachment 1**, the site is considered suitable for the proposed mixed use development with commercial (retail) use and residential use with minimal access to soil without any further assessment, management or remediation of contamination for the following reasons:

- no contaminating industries (as per Appendix A, DUAP 1998) have been identified or confirmed in the site history;
- the re-development of the site from a production or dance hall into a cinema complex in the mid 1970's is anticipated to have removed any potential minor contamination through the excavation of a basement on the site; and
- there appears to be no current onsite source of potential contamination due to the identification of a battery powered back-up power system and the lack of identified USTs or diesel powered generators onsite.

The hazardous building materials reports have identified a number of items of hazardous materials and the management and/or removal of these materials must follow the appropriate regulations and codes of practices.

## **Attachment 1 – Limitations**

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquiries.

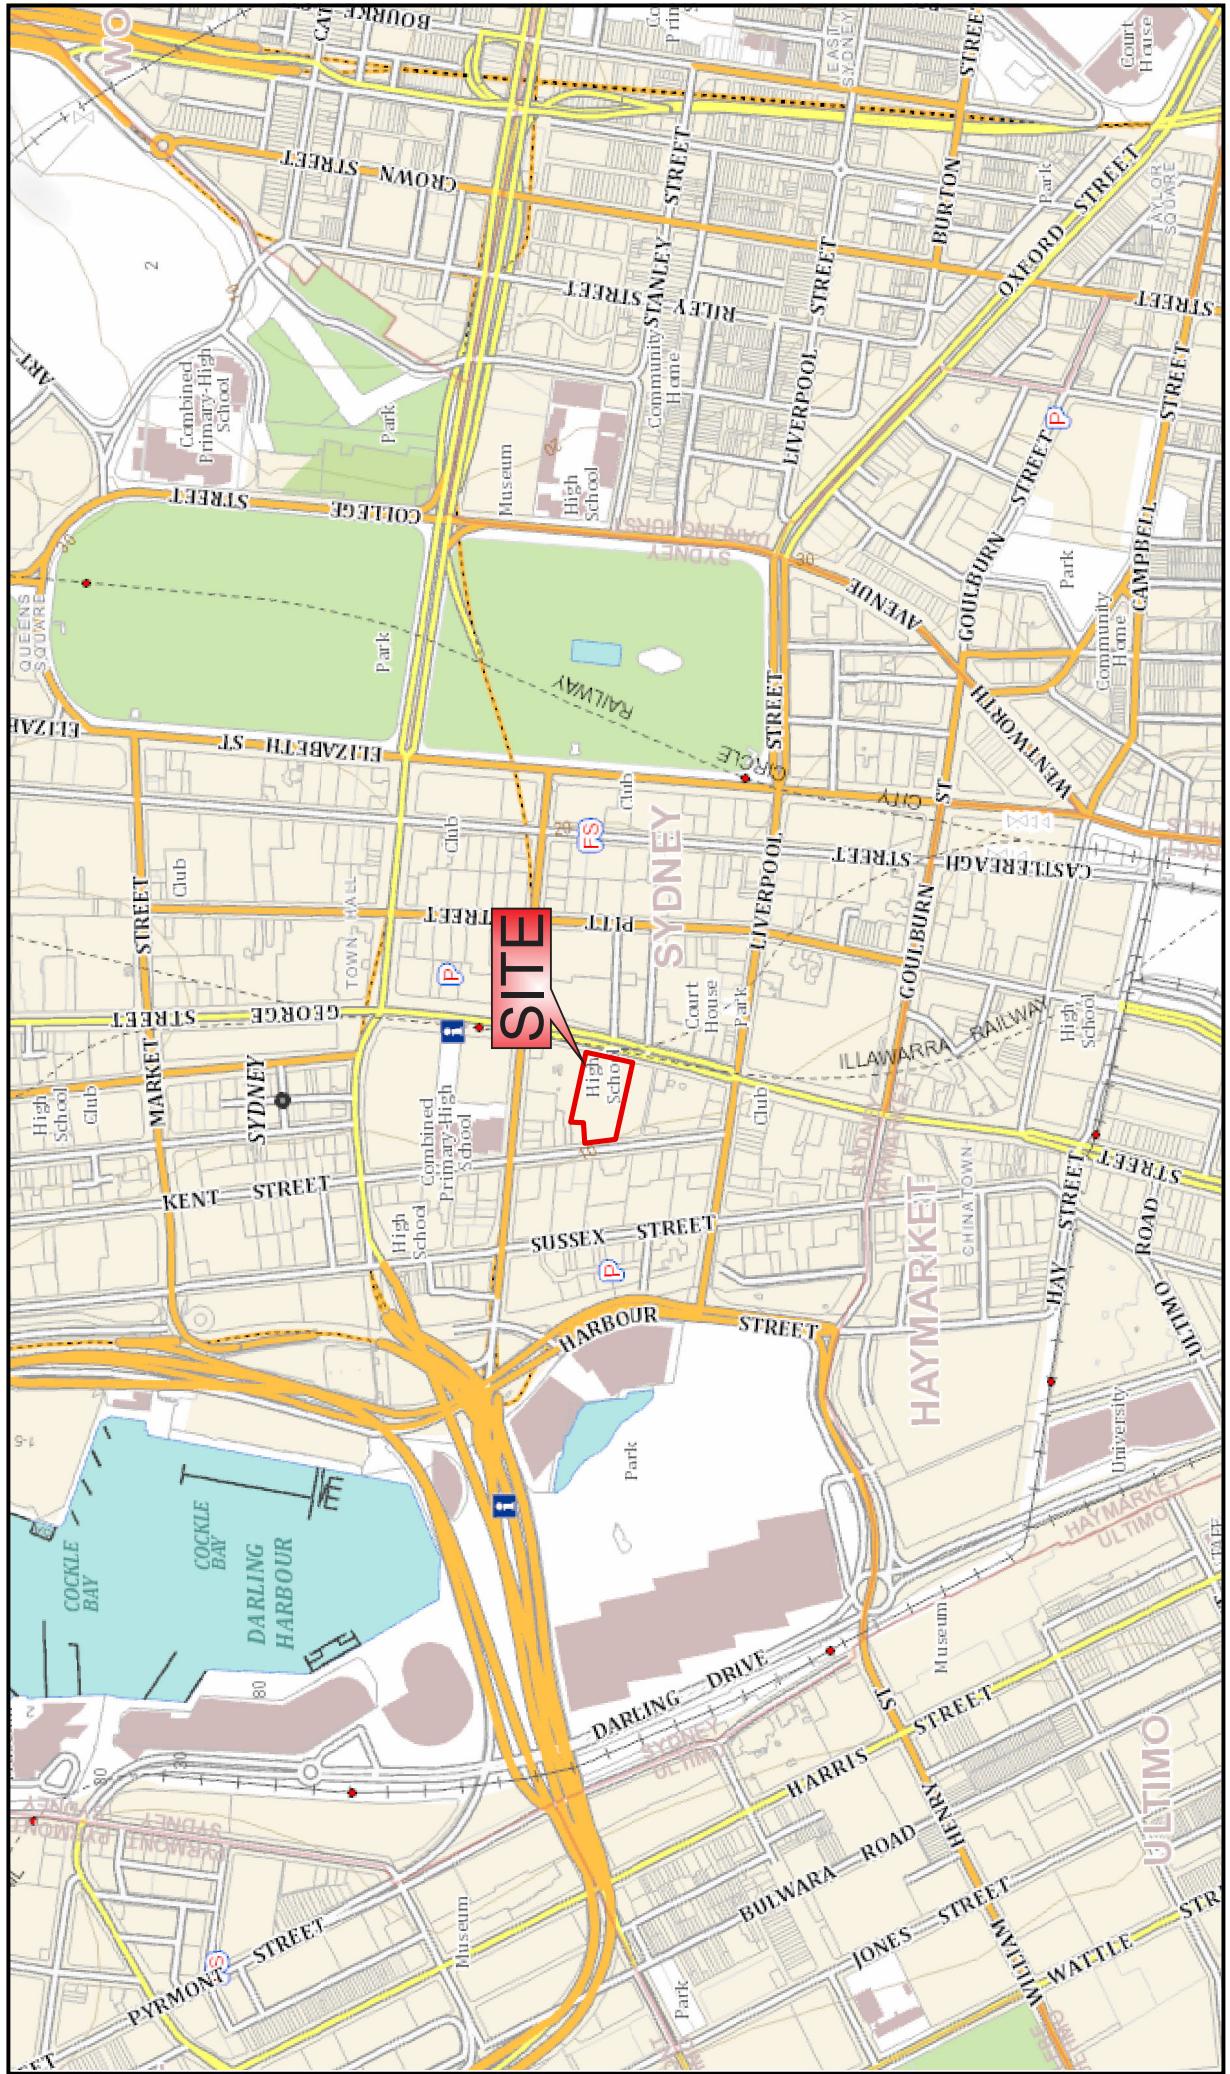

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

# List of NSW Contaminated Sites Notified to EPA as of 14 February 2014

## Background

In response to 2008 amendments to the *Contaminated Land Management Act 1997* (CLM Act) clarifying the Section 60 duty to report contaminated sites, the Environment Protection Authority (EPA) has received 1,063 notifications (as 14 February 2014) from owners or occupiers of sites where they believe the site is contaminated.

A strategy to systematically assess, prioritise and respond to these notifications has been developed by the EPA. This strategy acknowledges the EPA's obligations to make information available to the public under *Government Information (Public Access) Act 2009*.

When a site is notified to the EPA, it may be accompanied by detailed site reports where the owner has been proactive in addressing the contamination and its source. However, often there is minimal information on the nature or extent of the contamination.

For some notifications, the information indicates the contamination is securely immobilised within the site, such as under a building or carpark, and is not currently causing any offsite consequences to the community or environment. Such sites would still need to be cleaned up, but this could be done in conjunction with any subsequent building or redevelopment of the land. These sites may not require intervention under the CLM Act, but could be dealt with through the planning and development consent process.

Where indications are that the nominated site is causing actual harm to the environment or an unacceptable offsite impact (i.e. it is a "significantly contaminated site"), the EPA would apply the regulatory provisions of the CLM Act to have the responsible polluter and/or landowner investigate and remediate the site.

As such, the sites notified to the EPA and presented in the following table are at various stages of the assessment and/or remediation process. Understanding the nature of the underlying contamination, its implications and implementing a remediation program where required, can take a considerable period of time. The tables provide an indication, in relation to each nominated site, as to the management status of that particular site. Further detailed information may be available from the EPA or the responsible landowner.

The following questions and answers may assist those interested in this issue:

## Frequently asked questions

### What is the difference between the "List of NSW Contaminated Sites Notified to the EPA" and the "Contaminated Land: Record of Notices"?

A site will be on the Contaminated Land: Record of Notices only if the EPA has issued a regulatory notice in relation to the site under the *Contaminated Land Management Act 1997*.

The sites appearing on this “List of NSW contaminated sites notified to the EPA” indicate that the notifiers consider that the sites are contaminated and warrant reporting to the EPA. However, the contamination may or may not be significant enough to warrant regulation by the EPA. The EPA needs to review and, if necessary, obtain more information before it can make a determination as to whether the site warrants regulation.

### **Why my site appears on the list?**

Your site appears on the list because of one or more of the following reasons:

- The site owner and/or the person partly or fully responsible for causing the contamination notified to the EPA about the contamination under Section 60 of the *Contaminated Land Management Act 1997*. In other words, the site owner or the “polluter” believes the site is contaminated.
- The EPA has been notified via other means and is satisfied that the site is or was contaminated.

### **Does the list contain all contaminated sites in NSW?**

No. The list only contains contaminated sites that the EPA is aware of, with regard to its regulatory role under the CLM Act. An absence of a site from the list does not necessarily imply the site is not contaminated.

The EPA relies upon responsible parties to notify contaminated sites.

### **How are these notified contaminated sites managed by the EPA?**

There are different ways that the EPA manages these notified contaminated sites. First, an initial assessment is carried out by the EPA. At the completion of the initial assessment, the EPA may take one or more than one of the following management approaches:

- The contamination warrants the EPA’s direct regulatory intervention either under the *Contaminated Land Management Act 1997* or the *Protection of the Environment Operations Act 1997* (POEO Act), or both. Information about current or past regulatory action on this site can be found on EPA website.
- The contamination with respect to the current use or approved use of the site, as defined under the *Contaminated Land Management Act 1997*, is not significant enough that it warrants EPA regulation.
- The contamination does not require EPA regulation and can be managed by a planning approval process.
- The contamination is related to an operational Underground Petroleum Storage System, such as a service station or fuel depot. The contamination may be managed under the POEO Act and the Protection of the Environment Operation (Underground Petroleum Storage Systems) Regulation 2008.
- The contamination is being managed under a specifically tailored program operated by another agency (for example the Department of Industry and Investment’s *Derelict Mines Program*).

### **I am the owner of a site that appears on the list. What should I do?**

First of all, you should ensure the current use of the site is compatible with the site contamination. Secondly, if the site is the subject of EPA regulation, make sure you comply with the regulatory requirements, and you have considered your obligations to notify other parties who may be affected.

If you have any concerns, contact us and we may be able to offer you general advice, or direct you to accredited professionals who can assist with specific issues.

**I am a prospective buyer of a site that appears on the list. What should I do?**

You should seek advice from the vendor to put the contamination issue into perspective. You may need to seek independent expert advice.

The information provided in the list, particularly the EPA Site Management Class, is meant to be indicative only, and a starting point for your own assessment. Site contamination as a legacy of past site uses is not uncommon, particularly in an urbanised environment. If the contamination on a site is properly remediated or managed, it may not materially impact upon the intended future use of the site. However, each site needs to be considered in context.

## **List of NSW Contaminated Sites Notified to the EPA**

### **Disclaimer**

The EPA has taken all reasonable care to ensure that the information in the list of contaminated sites notified to the EPA (the list) is complete and correct. The EPA does not, however, warrant or represent that the list is free from errors or omissions or that it is exhaustive.

The EPA may, without notice, change any or all of the information in the list at any time.

You should obtain independent advice before you make any decision based on the information in the list.

The list is made available on the understanding that the EPA, its servants and agents, to the extent permitted by law, accept no responsibility for any damage, cost, loss or expense incurred by you as a result of:

1. any information in the list; or
2. any error, omission or misrepresentation in the list; or
3. any malfunction or failure to function of the list;
4. without limiting (2) or (3) above, any delay, failure or error in recording, displaying or updating information.

<b>THE EPA Site Management Class</b>	<b>Explanation</b>
<b>A</b>	The contamination of this site is being assessed by the EPA. Sites which have yet to be determined as significant enough to warrant regulation may result in no further regulation under the <i>Contaminated Land Management Act 1997</i> .
<b>B</b>	The EPA is awaiting further information to progress its initial assessment of this site.
<b>C</b>	The contamination of this site is or was regulated under the <i>Contaminated Land Management Act 1997</i> . Information about current or past regulatory action on this site can be found on the EPA website ( <a href="http://www.epa.nsw.gov.au">www.epa.nsw.gov.au</a> ) - Environmental Issues - Contaminated Land - Record of EPA notices.
<b>D</b>	The contamination of this site is or was regulated under the <i>Protection of the Environment Operations Act 1997</i> . Information about current or past regulatory action on this site can be found on the EPA website ( <a href="http://www.epa.nsw.gov.au">www.epa.nsw.gov.au</a> ) - Environmental Issues - Environment Protection Licences - POEO public register.
<b>E</b>	This is a premises with an operational Underground Petroleum Storage System, such as a service station or fuel depot. The contamination of this site is managed under the <i>Protection of the Environment Operations Act 1997</i> and the Protection of the Environment Operations (Underground Petroleum Storage Systems) Regulation 2008.
<b>F</b>	The contamination of this site is managed by a planning approval process. The consent authority is either the local council or a government agency, such as the Department of Planning.
<b>G</b>	Based on the information made available to the EPA to date, the contamination of this site is considered by the EPA to be not significant enough to warrant regulatory intervention under the <i>Contaminated Land Management Act 1997</i>
<b>H</b>	Initial assessment completed. The contamination of this site is to be regulated by the EPA
