SUBJECT: Information Relevant To Item 8.3 - Adoption - Cycling Strategy and Action Plan 2018-2030

For Noting

This memo is for the information of the Lord Mayor and Councillors.

Background

At the meeting of the Transport, Heritage and Planning Committee on 12 November 2018, further information was sought on the economic assessment of cycleways, RMS crash statistics and consultation survey responses.

The 2010 AECOM economic assessment of the Inner Sydney Regional Bike Network is available on the SydneyCycleways.net website, under Resources, Strategy and Research.

The City had the work updated in 2016 in conjunction with Transport for NSW, but this remains confidential at their request as it contains NSW budget commitments.

The NSW Centre for Road Safety interactive crash statistics website is:
<https://roadsafety.transport.nsw.gov.au/statistics/interactivecrashstats/index.html>

The consultation survey asked the question 'Which bike connections should we build first to improve safety and get more people riding?' Since the answer was free text it is not possible to rate the answers simply. The council report (in paragraph 13(h)) had summarised the responses as follows: "When asked which bike connections should be prioritised, the overwhelming number of responses said the CBD and inner city, specifically King Street, the Harbour Bridge and Liverpool Street. Pyrmont Bridge and Oxford Street also featured prominently." A full list of responses and a word cloud to show the most commonly mentioned streets, places and terms is attached.

190	Sort out the eastern suburbs -Bronte to City route	8/5/2018 2:44 PM
191	Generally the network is quite inconsistent - it's hard to predict what a route will actually be like to ride based on the 'type' of infrastructure involved. Many shared paths or 'cycle lanes' are nominal at best, or suddenly terminate with nowhere to go but the main traffic flow or footpath. If it's easier to predict and plan a route I think people would be more comfortable riding casually, which in turn build experience to potentially commute.	8/5/2018 2:39 PM
192	Separate bike lanes	8/5/2018 2:37 PM

196	Separated cycleway	8/5/2018 12:58 PM
197	I compared your planned routes with the Strava heat maps - this isn't necessarily the best way to judge the routes as not all cyclists and particularly commute/utility cyclists necessarily use Strava - however The St Johns Rd, Kelly Street, Mary Ann St through Ultimo looks like it would provide a corridor through an otherwise under-served area.	8/5/2018 12:50 PM

Cycling Strategy and Action Plan

219	Woollahra council need to jump on board. Taking Glenmore rd off Oxford, connecting via Gurner st to Hardgrave st (cycle lane up the hill) would help people from the area build confidence to get to the city and help commuters from the city get to the beach. It's quiet streets and Hardgrave especially is almost already built for this with a separated footpath halfway up. Not much extra works would be need for the next half and boom, you' have a way for cyclists to get up the hill with more confidence.	8/4/2018 12:57 PM
