

Attachment B

**2019/20 Investment Strategy for the
Management of Surplus Funds**

Investment Strategy

Purpose

The annual Investment Strategy sets out Council's investment goals and targets for the coming year. The aim of the strategy is to guide the management of Council's investment portfolio over the short to medium term to:

- achieve a balanced and diversified portfolio, in terms of allowable investment products, credit ratings and maturation terms that will outperform the benchmark indices
- ensure liquidity when required for Council's operational and capital expenditure needs.

Scope

The *Investment Strategy* applies to all managers and employees who actively manage the investment of surplus funds or have responsibility for employees who actively manage the investment of surplus funds.

This strategy should be read in conjunction with the *Investment Policy*.

Context

The City's investment strategy is determined after taking into consideration a review of the following issues:

- global and domestic economic investment environments
- investment policy and legislative constraints
- current composition of Council's investment portfolio
- long, medium and short term financial plans.

Global and domestic investment environments

Financial and investment environments, both globally and domestically, continue to improve at different rates across various regions. The global financial recovery process has been aided by a more standardised international regulatory process with more stringent capital adequacy requirements for financial institutions.

In Australia, a history of prudent regulation of the financial institutions by the Australian Prudential Regulation Authority (APRA) has meant that Australian based regulated financial institutions have already operated for an extended period under stringent capital adequacy and liquidity requirements. Council's investments all fall under APRA regulation with the result that the portfolio is conservative and secure.

Interest rates have been low for a sustained period and have reduce further domestically in the past year. At the time of writing this low interest rate environment is forecast to continue for the medium term.

Legislative environment

Council's investment opportunities are constrained by a combination of legislation, regulation and any directions and guidelines issued by the Minister or the Office of Local Government.

There has been no change to the investment legislative environment for a number of years and the most recent Ministerial Investment Order released in January 2011 continues to limit Council's investment options to:

- term deposits with Approved Deposit-taking Institutions (ADIs)
- other ADI senior ranked securities
- investments with NSW Treasury Corporation (T-Corp)
- funds or securities issued or guaranteed by the Commonwealth or any State or Territory.

Composition of Council's investment portfolio

The conservative nature of Council's Investment Strategy is clearly reflected in the structure of the portfolio, where 100% of the portfolio is invested with APRA-regulated ADIs.

Council's current portfolio is as follows (as at the end of August 2019):

| Investment | Split |
|--|-------------|
| Big Four banks | 68% |
| Australian mid-tier banks | 31% |
| Foreign controlled Australian based ADIs | 1% |
| Total APRA-regulated ADIs | 100% |

The allocation of assets within the portfolio is with very secure institutions. In the past year, Council has diversified the portfolio with further selected investment into the Australian mid-tier banks as they continue to reflect strength and stability.

Investment strategy

Council's investment portfolio will continue to be prudently managed in accordance with:

- Council's Investment Policy and related legislative and regulatory requirements,
- documented risk management procedures to preserve capital; and
- Council's operational and capital funding requirements.

Objectives

Council's investment strategy for the period is to maintain the highly secure profile of the portfolio, provide liquidity and deliver competitive investment returns commensurate with the portfolio structure.

As noted in the investment policy, the City's primary objective in the purchase of financial investments is to collect contractual cash flows (i.e. interest revenue) over the life of the investment, and redeem the principal sum at maturity, rather than to regularly trade to make a profit. This constitutes a 'Held-to-Maturity business model'; one of three options described under AASB 9 – Financial Instruments. Under AASB 9, the classification and measurement of financial instruments is determined by an entity's business model.

Risk profile

The risk profile for the Council's investment portfolio is based on the principles of being prudent, conservative and risk averse. This is achieved by managing the diversity and creditworthiness of investments in accordance with the Investment Policy and other relevant requirements.

Council's capital funding requirements will continue to remain high over the next few years, including the funding of infrastructure development for Green Square, possible community and commercial property acquisitions and the partial funding of the NSW State Government light rail project in George Street. As a result, the maturity profile of the investment portfolio has become more concentrated in the short and medium term rather than the longer term.

As a consequence, the proportion of longer dated floating rate notes in the portfolio is reducing while the proportion of short to medium dated term deposits and floating rate notes are increasing. All of these investments are with APRA regulated financial institutions so that credit risk remains minimal. The maturity profile of the investments is adequately spread over those periods to ensure that liquidity and maturity risks are also kept to a minimum.

The most favourable market for term deposits is mainly with the APRA regulated Australian mid-tier banks with the result that these banks comprise to over 30% of the portfolio and provide diversity within the portfolio.

Liquidity / Maturity

The majority of the City's cash and investments portfolio is held as internally restricted and externally restricted cash reserves to satisfy the City's legislative responsibilities and to set aside specific funds for Council's funding commitments to the major initiatives within the Sustainable Sydney 2030 Community Strategic Plan, including the Green Square Town Centre and sustainable energy projects and the partial funding of the NSW State Government light rail project in George Street.

There are presently increased demands for funding of capital projects with the result that within the maturity profile of the investment portfolio there is a responsive shift of funds from the longer term to the short and medium terms.

To ensure the City has available funds to meet both these commitments and its short-term operational and capital cash commitments, the following liquidity targets are set in accordance with the Investment Policy.

| Investment period | Cumulative Minimum % of total portfolio | Maximum % of total portfolio |
|-------------------|---|------------------------------|
| 1 month | 10% or \$50M | 100% |
| 2 to 12 months | 40% | 80% |
| 1 to 3 Years | 55% | 40% |
| 3 to 5 Years | 90% | 35% |
| > 5 Years | 100% | 10% |

The City's liquidity will be monitored on an ongoing basis to ensure the City's cash requirements are met and that liquidity parameters remain within allowable limits set out in the *Investment Policy*.

Return / Income

The City uses the following benchmarks to measure investment performance, in relation to both current month and 12-month rolling returns, against its return/income objectives:

- Bloomberg AusBond Bank Bill Index
- 30 day Bank Bill Rate.

The City aims to achieve returns equal to or above these benchmark rates for the period. However, this achievement remains secondary to the critical strategies of maintaining a prudent and conservative risk profile and in meeting Council's liquidity needs.

The City's current cash balances are applied in meeting immediate operational and capital commitments as well as future year's capital commitments. The City over the past few years took the opportunity to invest the funds that are required for future years into long term secure higher yielding investments before the interest rates relating to those investments began to decline. This strategy is one of the main reasons as to why the City currently delivers income returns in excess of the benchmark rates. However, this gap is continuing to narrow over time as these higher yielding investments mature and new investments are made at the currently offered lower yields.

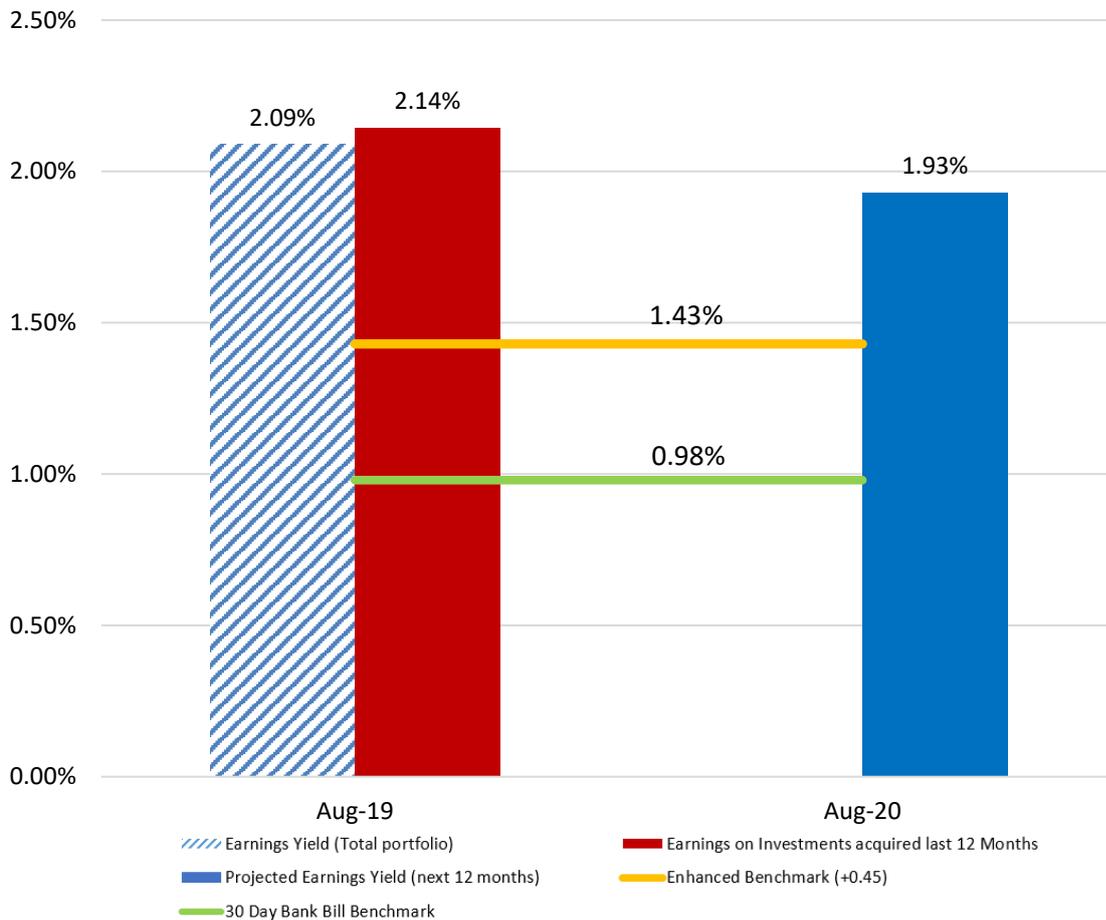

Since 2015, the City has utilised an additional strategic benchmark rate to measure its investment performance by exceeding the 30 day benchmark returns, by at least 45 additional basis points (0.45% p.a.). The 45 basis point increase is based on the average increased credit spreads (or margins) over bank bill rates on offer in relation to 30–90 day investments. The 30-90 bank bill rates represented a reflective benchmark at the time of adoption, but this spread has reduced in recent months.

Additionally, 2019 will present continued challenges to the City in delivering higher investment income returns, including the following:

- Interest rates continue to remain at low levels and expectations are that in the medium-term they may remain at these levels.
- A small number of long-term investments that are locked in at higher rates offered in previous years continue to mature. As these funds can now only be reinvested at the current lower yields offered in the market, average earnings will continue to fall.

The following chart illustrates how earnings yields are expected to reduce over the coming year as a result of the above factors. The narrowing of the gap between actual investment returns and the investment benchmarks is evident. Additionally, the chart also reflects the current lower earnings yield on investments acquired during the last 12 months when interest rates have been at historically low levels.

Portfolio Performance against Benchmarks Current and Projected (2019 to 2020)

Environmentally and Socially Responsible Investments

Council's ability to acquire environmentally and socially responsible investments within the current investment and policy environment remains limited, as:

- the structure of many of these investments remains prohibited under the current Ministerial Investment Order; and
- the global financial crisis caused significant declines in the valuation of the financial assets that comprise many of these investments.

Council will, however, continue to explore opportunities for supporting environmentally and socially responsible investments within these constraints. The investment climate is changing over time and Council notes that many large scale renewable projects are expected to evolve, which may offer sustainable investment opportunities in the future. Council will continue to encourage and give preference to these investments where they comply with the Ministerial Investment Order and satisfy Council's policy and investment objectives.
