Technical Appendices

Stage 1 DA Comparison **Technical Appendices**

- Building B envelope generally complies with Stage 1 DA envelope.
 Exceedence of Stage 1 DA to western extent of Building B. (Note: does not cause solar access non-compliance to adjacent residential dwellings).
 Exceedence beyond Stage 1 DA envelope to projecting bay.
 Significant reduction of built to boundary wall condition from Stage 1 DA to both ends of Building A.

- The proposal complies with the 24.2m height limit
 Slight exceedence beyond Stage 1 DA envelope to projecting bay.
 Significant inset from Stage 1 DA envelope to projecting bay.
 Exceedence beyond Stage 1 DA envelope for third projecting bay. (Note: ADG compliance is provided)
- 268

163-173 McEvoy Street Alexandria Architectural Design Report

Solar Access to Lawrence St Neighbour Technical Appendices

To establish the impacts of the proposal on the solar access to the neighbouring building at 118 - 136 Lawrence Street, the following steps were undertaken:

- Obtain satellite imagery.
- Overlay schematic plan on satellite imagery.
- Examine real estate imagery for location of fences and planters. Obtain a GIPA request for the architectural drawings of the neighbouring site to locate private open space. Incorporating information from above, model the neighbouring building. Undertaken solar access study to neighbour existing configuration.
- Incorporation...
 Undertaken solar access...
 Solar access study to neighbour proposed.
 Prepare sun eye view to neighbour proposed configuration.
 Identify apartments that are affected in plan and calculate number of apartments to satisfy Council's solar access and ADG 70% solar access apartments to satisfy Council's solar access and ADG 70% solar access apartments.

Satellite image of 118 - 136 Lawrence Street

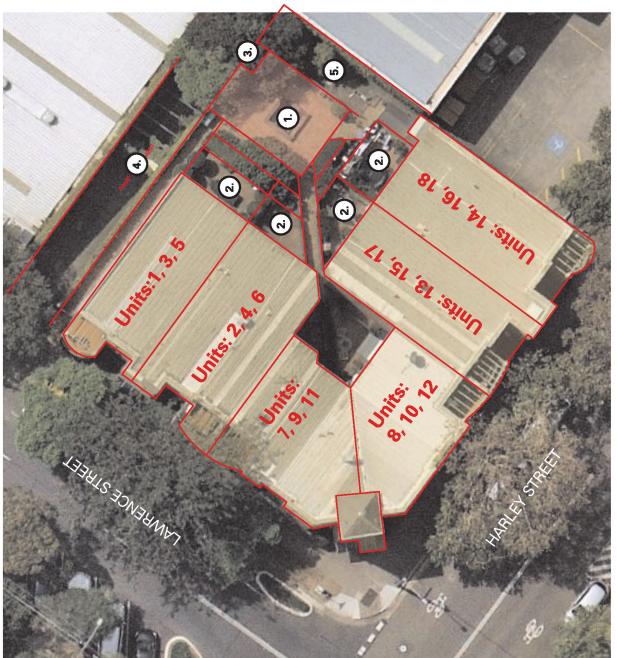

Solar Access to Lawrence St Neighbour (continued) Technical Appendices

The following areas can been identified:
1. Communal Open Space
2. Private Terrace

- Planter to Terrace: bisected by wooden fence.
- Ramp to Basement
- Planter
 Ramp to Basement
 Void to Basement

The private terrace is located to the south east of the site. The ramp to the basement is located along the eastern boundary of the neighbour's site the ramp, with planting on either side.

Bordering the communal space are a series of private terraces.

Satellite image of 118 - 136 Lawrence Street, Schematic Overlay

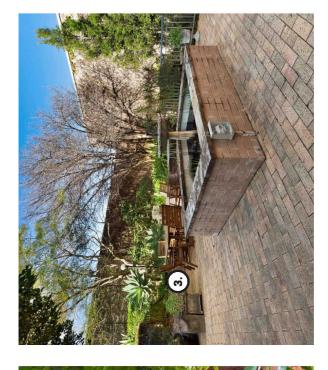

Solar Access to Lawrence St Neighbour (continued) **Technical Appendices**

Based of photographs of the 118 – 136 Lawrence Street courtyard the following assumptions can be made:

- Planters to private open space 6 brick course topped with a rowlock course: (86mm x 6) + 120mm = 636mm.

 Timber fences on planters appear to be a further 700mm approximately. Total fence height assumed to be 1500mm.

 Edge of eastern planter aligns with wall running along basement entry ramp.

Real estate photos of 118 - 136 Lawrence Street courtyard

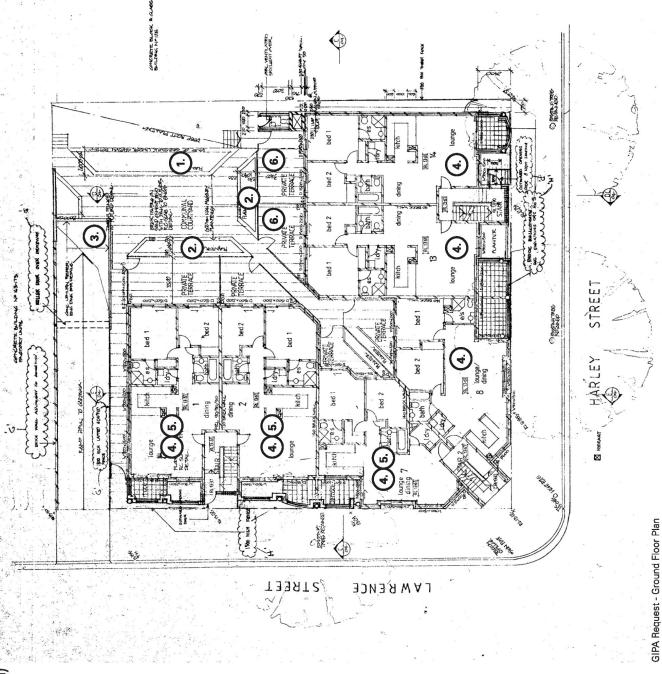

May 2020 Page 61

Solar Access to Lawrence St Neighbour (continued) Technical Appendices

A GIPA request has been undertaken to obtain plans of the neighbouring building 118 - 136 Lawrence Street.

The following comments are provided:

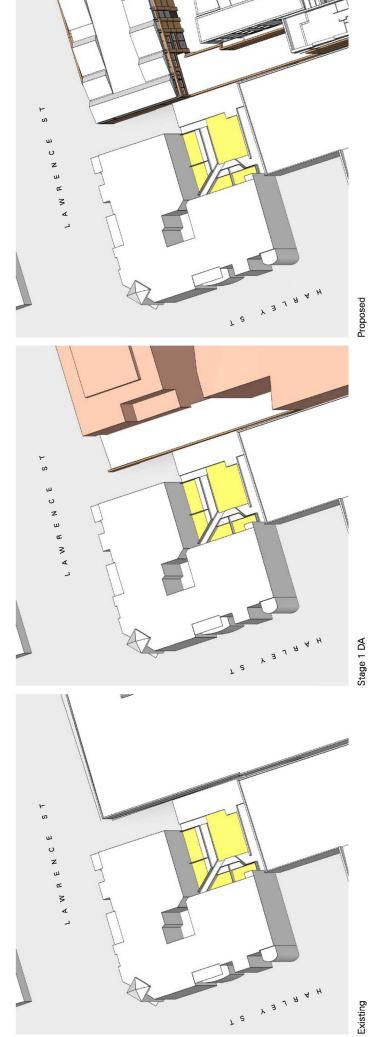

- All living rooms to Lawrence Street and Harley Street. Since the proposal's impact is confined to the courtyard, solar compliance to living rooms will be unaffected.
 - Units 1 to 6, 7, 9, and 11 achieve solar compliance via Lawrence Street 2
 - frontage. Units 13 and 14 can achieve compliant private open space via private terraces. က်

Solar Access to Lawrence St Neighbour (continued) **Technical Appendices**

Models used in Solar Analysis

For the purposes of solar analysis, the massing of 118 - 136 Lawrence Street was modeled, along with key fences, including those delineating private open space from the communal area.

273

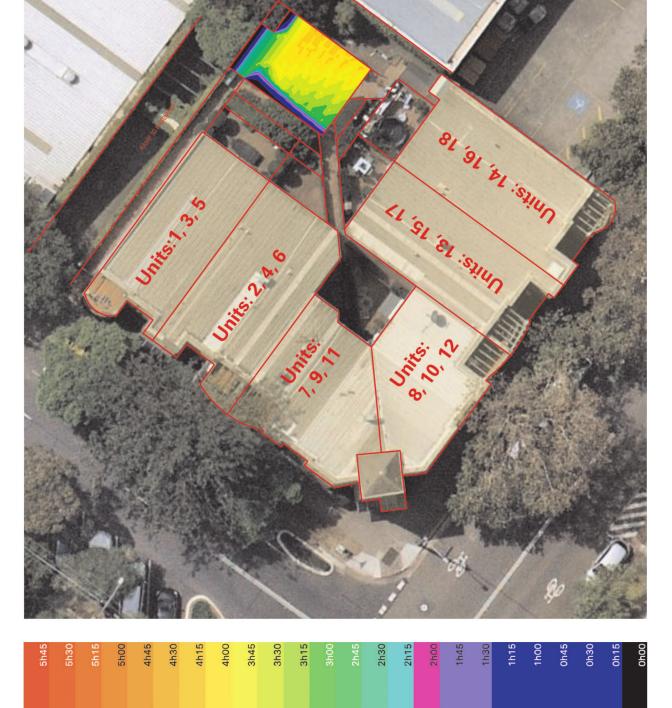

May 2020 Page 62

Priansa Pty Ltd Andrew Burns Architecture / PBD Architects

Existing Solar Access to Communal Open Space, June 21

Currently most of the communal open space receives about 4 hrs of sun between 9am and 3pm.

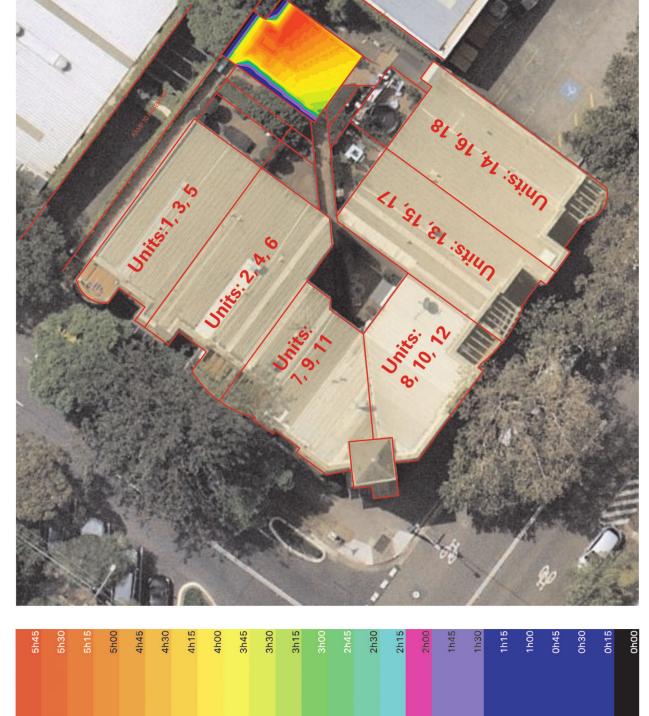

Solar access is provided to 81.4% of the communal open space for 2 hours between 9am and 3pm mid winter.

Stage 1 DA Solar Access to Communal Open Space, June 21

Currently most of the communal open space receives about 4 hrs of sun between 9am and 3pm.

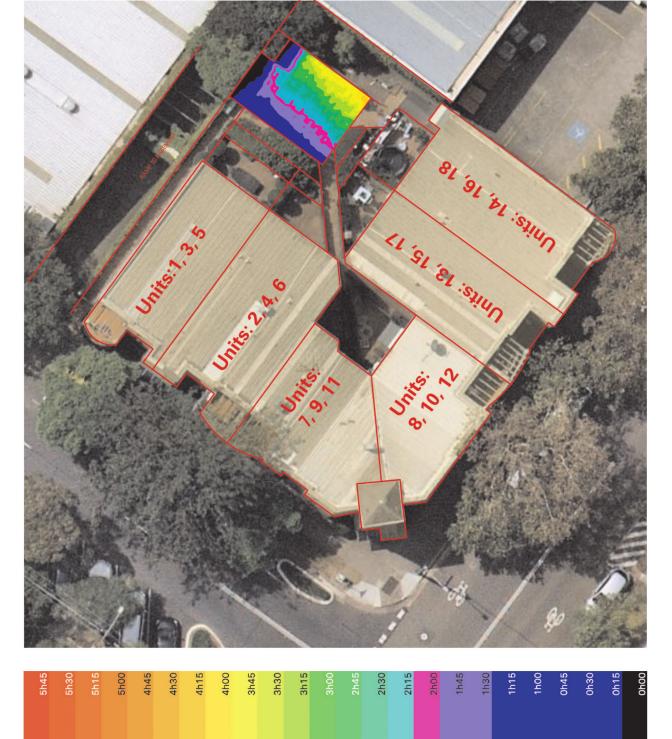

Solar access is provided to 81.4% of the communal open space for 2 hours between 9am and 3pm mid winter.

Proposal's Impact to Solar Access to Communal Open Space, June 21

The proposal reduces solar access to the principal usable area of the neighbouring open space, but retains solar access to 64.6% of the principle usable area for a period of 2 hours between 9am and 3pm mid winter.

On this basis, solar access compliance to the communal open space is provided.

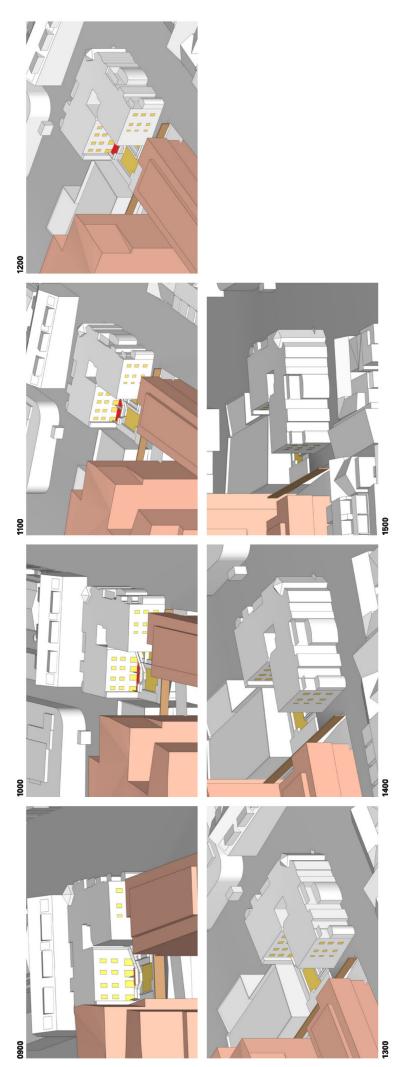

June 21 - Sun Eye, Existing

Windows facing the communal private space and the courtyard have been highlighted yellow. Private open space is shown red. This analysis shows the existing solar access to habitable rooms.

June 21 - Sun Eye, Stage 1 DA

Windows facing the communal private space and the courtyard have been highlighted yellow. Private open space is shown red. This analysis shows the existing solar access to habitable rooms.

June 21 - Sun Eye, Proposed

Windows facing the communal private space and the courtyard have been highlighted yellow. Private open space is shown red. The proposal preserves solar access to all private open spaces and living room glazing that currently gains solar access.

does not cause any apartments to lose private open The proposal's impact on 118-136 Lawrence Street space that currently achieves >2hrs solar access.

The proposal retains >2hrs solar access to 11 / 18 (61%) apartments. On this basis, solar access is not reduced and therefore compliance is provided.

Technical Appendices Shadow Impact Studies

Shadow diagrams have been prepared for 9am-3pm mid-winter. The proposal does not cause net solar access impacts to neighbouring dwellings during this period and therefore provides compliance the with controls of SDCP 2012.

SEPP 65 Design Verification Statement **Technical Appendices**

A statement against the criteria of SEPP 65 is as follows:

Principle 1: Context

Good design responds and contributes to its context. Context can be defined as the key natural and built features of an area.

location's current character or, in the case of precincts undergoing a transition, the desired future character as stated in planning and design policies. New Responding to context involves identifying the desirable elements of a buildings will thereby contribute to the quality and identity of the area.

industrial volumes of the context. The masonry volumes are capped by a group The proposal comprehensively responds to the context. The project mediates residential context of Erskineville to the north. The design incorporates robust masonry volumes to the McEvoy St frontage resonating with the large scale between the industrial grain of Alexandria to the south and the fine grain of sawtooth metallic forms, further referencing the industrial context.

the terrace grain of the context. The masonry base of Building B is capped by a conservation area, incorporating vertical blade wall elements to resonate with series of metallic volumes. The roof profile comprises an asymmetrical gable, resonating with the sawtooth expression of Building A but shifting towards a The Lawrence St frontage responds to the fine grain terrace context of the residential gable identity.

Principle 2: Scale

285

Good design provides an appropriate scale in terms of the bulk and height that suits the scale of the street and the surrounding buildings.

and height needs to achieve the scale identified for the desired future character Establishing an appropriate scale requires a considered response to the scale of existing development. In precincts undergoing a transition, proposed bulk

observes the 5 storey street wall control, setting back the upper levels 3m in accordance with DCP requirements. The upper two floors are articulated as a series of metallic volumes, sitting above a mediating level that is slightly set The proposal responds sensitively to the scale of the context. The proposal back to enable the upper levels to be articulated as independent volumes.

The McEvoy Street frontage is broken into three distinct masonry volumes, contrasting with the excessively linear street wall buildings of the McEvoy

The proposal complies with the LEP height limit + 10% design excellence

Principle 3: Built form

domain, contributes to the character of streetscapes and parks, including their purpose, in terms of building alignments, proportions, building type and the manipulation of building elements. Appropriate built form defines the public Good design achieves an appropriate built form for a site and the building's views and vistas, and provides internal amenity and outlook

proposal incorporates a strong street wall, clearly defining the public domain. The McEvoy Street frontage is broken into three volumes, differentiated in The proposal incorporates a considered and appropriate built form. The material and detail.

whilst the centre volume contains a double / double / single storey articulation, thereby incorporating a double storey volume at the building entries. The two end volumes contain a single / double / double storey articulation,

differentiates the massing from various approaches, introducing animation and profile consisting of rising sawtooth forms. A subtle rhythm is introduced with sawtooths, rising front, rear and side and providing a rotational symmetry that The upper levels are broken into multiple smaller volumes with varying roof

Principle 4: Density

Good design has a density appropriate for a site and its context, in terms of floor space yields (or number of units or residents)

context, availability of infrastructure, public transport, community facilities and Appropriate densities are sustainable and consistent with the existing density stated desired future density. Sustainable densities respond to the regional in an area or, in precincts undergoing a transition, are consistent with the environmental quality.

awrence Street frontage for all residents with the dwelling, enabling this high and Alexandria Park. The proposal enables a direct pedestrian access to the walking distance to high quality parkland of Erskineville Oval, Sydney Park The local context provides a high degree of amenity, located in close evel of amenity to be enjoyed.

The site is located in close proximity to multiple transport links, in immediate proximity to bus routes and in reasonable walking distance to Erskineville

The proposal complies with the FSR control applicable to the site. On the above basis, the proposal provides appropriate density.

Principle 5: Resource, energy and water efficiency

Good design makes efficient use of natural resources, energy and water throughout its full life cycle, including construction. Sustainability is integral to the design process. Aspects include demolition of existing structures, recycling of materials, selection of appropriate and sustainable materials, adaptability and reuse of buildings, layouts and built form, passive solar design principles, efficient appliances and mechanical services, soil zones for vegetation and reuse of water.

considerations and exceeds Basix / Nathers requirements, incorporating a The proposal has been carefully designed in response to sustainability range of measures as outlined by Integreco under separate cover.

introduction of naturally ventilated lightwells that provide supplementary light The proposal optimises passive performance, in particular through the and ventilation to the dwellings.

durability, in particularly the masonry external surfaces. These materials enable maintenance as required over time, without requiring replacement of the base The proposal incorporates a considered material palette that provides material.

Principle 6: Landscape

Good design recognises that together landscape and buildings operate as an integrated and sustainable system, resulting in greater aesthetic quality and amenity for both occupants and the adjoining public domain.

to the positive image and contextual fit of development through respect for Landscape design builds on the existing site's natural and cultural features solar access, micro-climate, tree canopy and habitat values. It contributes environmental performance by co-ordinating water and soil management, in responsible and creative ways. It enhances the development's natural streetscape and neighbourhood character, or desired future character.

equitable access and respect for neighbours' amenity, and provide for practical Landscape design should optimise useability, privacy and social opportunity, establishment and long term management.

The landscape design seeks to create a variety of functional external spaces for the residents and visitors of the building.

May 2020 Page 74

Technical Appendices SEPP 65 Design Verification Statement (continued)

Areas of planting at the McEvoy Street entries mark the main pedestrian entries into the site at these openings and glimpses of the main common open space greening and foyer landscape will also be visible. Seating integrated within planter bads within the foyers provide spaces for visitors and residents to sit with a view through the voids to the upper levels. Further seating within the covered open space serve to compliment the outer open space allowing for all weather and all day use. These seating areas will also provide location for informal social interactions.

Layered planting of trees, shrubs and groundcovers provide a screening for neighbours and discourage users within close proximity of their backyards.

An extensive deep soil area allows for canopy tree planting within the centre of the site, enabling a green outlook from a range of levels within the development and for surrounding neighbours. Permeable pathways provide access while allowing for contiguous soil and dissipation of water. The central common area features a large lawn area to cater to a range of uses, including informal play, exercise and passive recreation. A barbeque and dining area adiacent will provide a space for socialising.

The change of level at the Lawrence Street boundary is utilised within the residences' terraces to create a private terraced courtyard which can be viewed from within residences.

Principle 7: Amenity

286

Good design provides amenity through the physical, spatial and environmental quality of a development.

Optimising amenity requires appropriate room dimensions and shapes, access to sunlight, natural ventilation, visual and acoustic privacy, storage, indoor and outdoor space, efficient layouts and service areas, outlook and ease of access for all age groups and degrees of mobility.

The proposal provides a high level of amenity, incorporating clear and conventional apartment planning. Appropriate room dimensions are incorporate, providing compliance with ADG requirements to all rooms. The proposal avoids narrow 'gunbarrel' through apartments, instead providing through apartments with wide fronting 6.1m wide living rooms, providing a greater sense of interior space.

A large number of two storey maisonette apartments are provided throughout, located to the upper levels of Building A and the entirety of Building B. This provides a high degree of variety of apartment types across the development.

The plan is configured to optimise solar access and amenity, with the three projecting bays stepping to enable northern sun to the through apartments adjacent.

Principle 8: Safety and security

Good design optimises safety and security, both internal to the development and for the public domain.

This is achieved by maximising overlooking of public and communal spaces while maintaining internal privacy, avoiding dark and non-visible areas, maximising activity on streets, providing clear, safe access points, providing quality public spaces that cater for desired recreational uses, providing lighting appropriate to the location and desired activities, and clear definition between public and private spaces.

The proposal carefully responds to safety and security criteria, providing overlooking of communal spaces, whilst maintaining privacy to apartments through solid upstands to balconies.

The McEvoy Street frontage is activated through the presence of commercial tenancies, providing a range of types.

Principle 9: Social dimensions and housing affordability

Good design responds to the social context and needs of the local community in terms of lifestyles, affordability, and access to social facilities.

New developments should optimise the provision of housing to suit the social mix and needs in the neighbourhood or, in the case of precincts undergoing transition, provide for the desired future community.

New developments should address housing affordability by optimising the provision of economic housing choices and providing a mix of housing types to cater for different budgets and housing needs.

The proposal provides a range of housing types and dwelling sizes, incorporating conventional single storey apartments and a number of two storey maisonettes. The proposal contains compact one bed apartments, through to overscaled three bedroom apartments.

Principle 10: Aesthetics

Quality aesthetics require the appropriate composition of building elements, textures, materials and colours and reflect the use, internal design and structure of the development. Aesthetics should respond to the environment and context, particularly to desirable elements of the existing streetscape or, in precinicts undergoing transition, contribute to the desired future character of the area.

The aesthetics of the proposal have been holistically considered, incorporating a carefully designed materiality that includes masonry base with a variety of brick tones and details, capped by a series of metallic volumes with varying sawtooth forms. The volumes are articulated with horizontal and vertical breaks, providing a legible group of masses.

The masonry component to the McEvoy Street frontage has a strong grid expression that responds to the industrial warehouse identity, contrasting to the masonry portal expression of the Lawrence Street frontage that responds to the terrace house grain.

The proposal contributes to the desired future character of the area, an imagined future that is informed by the industrial past.

development at 163-173 McEvoy St, Alexandria.

May 2020 Page 77

Priansa Pty Ltd Andrew Burns Architecture / PBD Architects

Technical Appendices SLEP Clause 6.21 Design Excellence Statement (continued)

(ix) Pedestrian, cycle, vehicular and service access and circulation requirements, including the permeability of any pedestrian network.

Refer Statement of Environmental Effects, Parking and Traffic Management Plan and Green Travel Plan. (x) The impact on, and any proposed improvements to, the public domain.

Refer Landscape Plan.

(xi) The impact on any special character area.

The proposal is located immediately adjacent to Conservation Area C2. The design has been prepared to respond explicitly to this area, integrating a fine grain typology to the Lawrence Street frontage. The proposal incorporates articulated masonry party wall expression, capped by brick parapets. The proposal incorporates a two storey street wall above Lawrence Street level, with the upper level set back behind the parapet and articulated with metallic cladding. These measures in combination provide a sensitive response to the conservation area.

(xii) Achieving appropriate interfaces at ground level between the building and the public domain.

288

The proposal addresses the McEvoy Street frontage (Building A) by incorporating generous building entries at grade with the public domain, both to the residential lobby and the commercial spaces.

The proposal addresses the Lawrence Street frontage with a generous entry bridge, spanning across to the residential entry.

Public art significantly enhances the interface between the building and public domain, incorporating Jamie North's 'Assemblage' work at each of the building entries. Landscape further enhances the interface, with pocket gardens introduced adjacent to the McEvoy Street entries, flowing into the covered space, and the landscape gardens of the dwelling frontages provided to Lawrence Street, utilising the 3m deep soil area provided at that location.

(xiii) Excellence and integration of landscape design.

The landscape design has been comprehensively integrated with the architectural design, used as a tool to provide privacy, navigate level changes across the site, and to provide amenity to the streetscape. The material palette relates strongly to the architecture, which references the site's industrial character and heritage. The landscape has also been designed to consider the

noise impacts to dwellings above, avoiding undesirable echo effects in atriums, and concentrating more active communal uses to a generously proportioned communal courtyard.

Areas of planting at the McEvoy Street entries mark the main pedestrian entries into the site at these openings and glimpses of the main common open space greening and foyer landscape will also be visible. Seating integrated within planter beds within the foyers provide spaces for visitors and residents to sit with a view through the voids to the upper levels. Further seating within the covered open space serve to compliment the outer open space allowing for all weather and all day use. These seating areas will also provide location for informal social interactions.

Layered planting of trees, shrubs and groundcovers provide a screening for neighbours and discourage users within close proximity of their backyards.

An extensive deep soil area allows for canopy tree planting within the centre of the site, enabling a green outlook from a range of levels within the development and for surrounding neighbours. Permeable pathways provide access while allowing for contiguous soil and dissipation of water. The central common area features a large lawn area to cater to a range of uses, including informal play, exercise and passive recreation. A barbeque and dining area adjacent will provide a space for socialising.

The change of level at the Lawrence Street boundary is utilised within the residences' terraces to create a private terraced courtyard which can be viewed from within residences.

These items in combination demonstrate a comprehensive integration of landscape across the site.

Thankyou for your consideration of this proposal.
