Summary of Submissions and Responses

Community submissions

Submissions were received from 11 members of the community.

Summary of key matter raised in submission	Officer's response
Support for expanded retail area	
	submissions)
 Eight submissions expressed general support for the proposed expanded retail area (North Alexandria). Key reasons for support include: an appreciation that the planning proposal will allow locals to walk to large format retail instead of having to drive to shopping centres further away; an increase opportunity for larger retail will complement current opportunities in the area; and it will create more opportunity for retail in walking distance of densely populated areas. 	Support for the planning proposal is noted.
Darking and I	oading zones
	submissions)
 Three submissions raise the need for more diverse forms of parking and loading needed to support retail development, including: short-term parking; cargo bike parking (wider cycle parking); drop-off zones; waiting zones; loading zones; and kiss and ride facilities. One submission suggests that larger cargo bikes could help to replace car trips and reduce traffic in the area.	This planning proposal, while primarily focused on expanding opportunities for supermarkets in the Green Square Area, also includes provision to amend the Sydney LEP to introduce a maximum parking rate for retail with a combined gross floor area greater than 2,000 square metres. More detailed provisions related to parking and loading are included in the Sydney DCP 2012 and do not fall within the scope of this planning proposal. This submission has been referred for consideration in the broader review of the City's LEP and DCP controls.

Summary of key matter raised in submission Officer's response	
Road and footpath infrastructure	
(raised in 2 submissions)	
Two submissions raise concerns about the road and footpath infrastructure in the proposed expanded retail area. One submission expressed concern about how the council plans to manage an increase in traffic and whether the existing roads and footpaths can safely accommodate the additional traffic when it consists of a wide range of users including cyclists and trucks. The other submission raises the need for an improved cycling network to improve accessibility, particularly east/west connections.	 Locating supermarkets in centres and close to dense residential communities reduces the need for people to drive to supermarkets outside the area. The proposed changes do not increase the total retail floor space permitted overall hence minimal changes to traffic impacts are expected. Additionally, each development will also be required to assess pedestrian and traffic impacts as part of the subsequent development application process. The following initiatives will also improve the road and footpath environment in the area: City of Sydney Cycling Strategy and Action Plan; provision of east-west public/active transport link from Erskineville and Green Square Town Centre currently under construction; land dedication requirements in North Alexandria as sites are redeveloped will widen paths and create new streets and lanes; Green Square and Waterloo Transport Action Plan; and behaviour change campaign at Green Square to encourage sustainable transport use.
Support for more diverse retail	types in the extended retail area
	submissions)
Two submissions request more diverse forms of retail be provided in the area, specifically clothing stores and unique shops.	The expanded retail area will encourage the creation of additional retail floor space. This provides opportunity for new types of retail to emerge. Large supermarkets are important anchors for smaller retail, often forming the nucleus of local centres where people come to grocery shop, but also visit smaller surrounding shops while there. As more supermarkets locate in the area, it will create opportunities for smaller and more diverse forms of retail to be provided.
Support for parking caps for large retail

Landowner submission - 1-3 Rosebery Avenue

A submission was received from a landowner located outside the expanded retail area.

Summary of key matter raised in submission	Officer's response
	venue, Rosebery
 Supports key elements of the Retail Review including: updated population projections retail clustering definitions the need to deliver a holistic supermarket and retail network support for reviewing the study every five years. 	Support for key elements noted.
States that Rosebery North is identified as a retail cluster/centre.	The identification of Rosebery north as a retail cluster does not refer to a designation of a level in a Centre hierarchy. The Study says (Page 52) that 'It is important not to conflate 'retail clusters' and 'retail centres'. Retail clusters are used for modelling purposes only.
States that supermarket accessibility mapping completed in the review shows that there are a number of recognised gaps, including Rosebery North.	The Rosebery accessibility gap was shown in Figure 15 of the Study. Note that there are significant sites yet to be developed which will fill this gap.
States that Rosebery and the southern areas of the village are only served by two small supermarkets (of less than 1,000m2 each), with no large or standard supermarket provided in the area (existing or proposed).	The planning proposal for the Suttons Site in Epsom Park was endorsed by Council for finalisation in June 2023. It includes provision for a 1,200 square metre supermarket. If 1-3 Rosebery Avenue includes a small supermarket in its redevelopment, it will mean that there will be two new supermarkets in addition to the two existing supermarkets in the area. This will be enough to close this accessibility gap without the need for a large supermarket that will detract from the identified centres.
	The retail cap encourages a more dispersed pattern of smaller supermarkets and ancillary retail for day-to-day needs with larger supermarkets supporting identified centres. This pattern enables for more people to be within walking distance of a supermarket while also supporting the vitality of major centres, such as the Green Square Town Centre.

known developments.	
Based on this projected growth and the additional supermarket expenditure this would generate, it projects that this could support two large supermarkets.	The Review identified the need for an additional 9,256sqm of supermarket floor space to 2041 with an existing shortfall of 2,112sqm. This figure is in addition to a number of supermarkets in the study area that are

suggests that new retail facilities should be	αρριονέα μαι ποι γει μαπι.
accommodated to support growth in the community and a holistic retail hierarchy in the Green Square and City South Village.	The Retail Study did not recommend removal of the retail cap on or near the submitter's site as it was not identified as a retail centre and there was only a small forecast of under provision of supermarket floor area in the "Rosebery North" cluster.
	Forming a centre with a larger supermarket at this location contradicts the recommendations of the Retail Study and is not supported. However, delivery of a smaller supermarket is considered acceptable and consistent with the recommendations of the Retail Study.
Highlights strong potential for additional retail	The planning proposal creates no impediment
