

Attachment B

2024-25 Investment Strategy

Investment Strategy

Purpose

The annual Investment Strategy (“the Strategy”) sets out the City of Sydney’s (“the City’s”) investment goals and targets for the coming year. The aim of the Strategy is to guide the management of the City’s investment portfolio to:

- achieve a balanced and diversified portfolio, in terms of allowable investment products, credit ratings and maturation terms that will outperform the benchmark indices
- ensure liquidity requirements are met for the City’s operational and capital expenditure needs.

Scope

The *Investment Strategy* applies to all managers and workers who actively manage the investment of surplus funds or have responsibility for workers who actively manage the investment of surplus funds.

This strategy should be read in conjunction with the *Investment Policy*.

Context

The City’s investment strategy is determined after taking into consideration a review of the following issues:

- global and domestic economic investment environments
- investment policy and legislative constraints
- current composition of Council’s investment portfolio
- long, medium- and short-term financial plans.

Global and domestic investment environments

Annual CPI inflation increased to 3.8 per cent in the June 2024 quarter, up from 3.6 per cent in the March 2024 quarter, but lower than the 4.1 per cent annual rise in the December 2023 quarter. The rate of inflation remains above the Reserve Bank of Australia’s (RBA) target range of two to three per cent. While global factors explain much of the variation in inflation, domestic factors also continue to play a role. Widespread upward pressures on prices remain in the economy due to strong demand, a tight labour market and capacity constraints in some sectors of the economy.

The Reserve Bank of Australia (RBA) board most recently raised the official cash rate on 7 November 2023, by 25 basis points to 4.35 per cent, a 12-year high, up from the record low of 0.10 per cent level in May 2022. While inflation is declining, economic analysts note that the decline has been slower than anticipated, increasing the possibility of a further cash rate rise. However, the general expectation of the majority of banks is that official rates will remain on hold until late this calendar year, provided that the declining inflation trend continues, with potential for rate cuts to follow.

In Australia, a history of judicious regulation of the financial institutions by the Australian Prudential Regulation Authority (APRA) has meant that Australian based regulated financial institutions have already operated for an extended period under stringent capital adequacy and liquidity requirements. The City’s investments all fall under APRA regulation with the result that the portfolio is conservative and secure.

Legislative environment

Council’s investment opportunities are constrained by a combination of legislation, regulation and any directions and guidelines issued by the Minister or the Office of Local Government.

There has been no change to the investment legislative environment for several years and the most recent Ministerial Investment Order released in January 2011 continues to limit Council’s investment options to:

- term deposits with Authorised Deposit-taking Institutions (ADIs)
- other ADI senior ranked securities
- investments with Australian government treasury bodies, including NSW Treasury Corporation (T-Corp)
- funds or securities issued or guaranteed by the Commonwealth or any State or Territory.

These guidelines were developed, in large part, as a response to the Global Financial Crisis and its impact on the local government sector’s investments. They effectively limit the City’s investment profile to something similar to a cash managed fund, which generally produce lower returns but provide a high level of security. The City’s returns from the investment portfolio remain in line with cash managed funds in the market.

Composition of the City’s investment portfolio

The conservative nature of Council’s Investment Strategy is clearly reflected in the structure of the portfolio, where 100% of the portfolio is invested with APRA-regulated ADIs.

Council’s current portfolio is as follows (as at the end of August 2024):

Investment	Split
Big Four banks	70%
Australian mid-tier banks	17%
Australian government treasury bodies	1%
Foreign controlled Australian based ADIs	12%
Total	100%

The allocation of assets within the portfolio is with very secure institutions. In the past year, the City has diversified the portfolio with further selected investment into the Australian mid-tier banks as they continue to reflect strength and stability.

Investment strategy

The City's investment portfolio will continue to be prudently managed in accordance with:

- the City's Investment Policy and related legislative and regulatory requirements,
- documented risk management procedures to preserve capital; and
- the City's operational and capital funding requirements.

Objectives

The City's investment strategy for the period is to maintain the highly secure profile of the portfolio, ensure adequate liquidity and deliver competitive investment returns commensurate with the portfolio structure.

As noted in the investment policy, the City's primary objective in the purchase of financial investments is to collect contractual cash flows (i.e. interest revenue) over the life of the investment, and redeem the principal sum at maturity, rather than to regularly trade to make a profit. This constitutes a 'Held-to-Maturity business model'; one of three options described under AASB 9 – Financial Instruments. Under AASB 9, the classification and measurement of financial instruments is determined by an entity's business model.

Risk profile

The risk profile for the City's investment portfolio is based on the principles of being prudent, conservative and risk averse. This is achieved by managing the diversity and creditworthiness of investments in accordance with the Investment Policy and other relevant requirements.

The City's capital funding requirements will continue to remain high over coming years, including the funding of an expansive capital works program, potential community and commercial property acquisitions and the purchase of land for future open space. As a result, the maturity profile of the investment portfolio has generally become more concentrated in the short and medium term rather than the longer term. The maturity profile of the investments is adequately spread over those periods to ensure that liquidity and maturity risks are also kept to a minimum. All of these investments are held with APRA regulated financial institutions so that credit risk likewise remains minimal.

The most favourable market for term deposits is often with the APRA regulated Big Four Banks and Australian mid- tier banks. Accordingly, investments with these banks comprise approximately 87% of the City's total holdings at the time of writing and provide diversity within the portfolio.

Liquidity / Maturity

A significant portion of the City's cash and investments portfolio is held as internally restricted and externally restricted cash reserves to satisfy the City's legislative responsibilities and to set aside specific funds for the City's funding commitments to the major initiatives within the Delivering Sustainable Sydney 2030-2050 Community Strategic Plan.

To ensure the City has available funds to meet these commitments and its short-term operational and capital cash commitments, the following liquidity targets are set in accordance with the Investment Policy.

Investment period	Cumulative Minimum % of total portfolio
1 month	10% or \$50M <i>(the greater of)</i>
2 to 12 months	40%
1 to 3 Years	55%
3 to 5 Years	90%
> 5 Years	100%

The City’s liquidity is monitored on a daily basis to ensure the City’s cash requirements are met and that liquidity parameters remain within allowable limits set out in the *Investment Policy*.

Return / Income

The City uses the following benchmarks to measure investment performance, in relation to both current month and 12-month rolling returns, against its return/income objectives:

- Bloomberg AusBond Bank Bill Index
- 30 day Bank Bill Rate as published by the Reserve Bank of Australia

The City aims to achieve portfolio returns equal to or above these benchmark rates for the period. However, this achievement remains secondary to the critical strategies of maintaining a prudent and conservative risk profile and in meeting the City’s liquidity needs. This includes immediate operational and capital commitments as well as future years’ capital commitments.

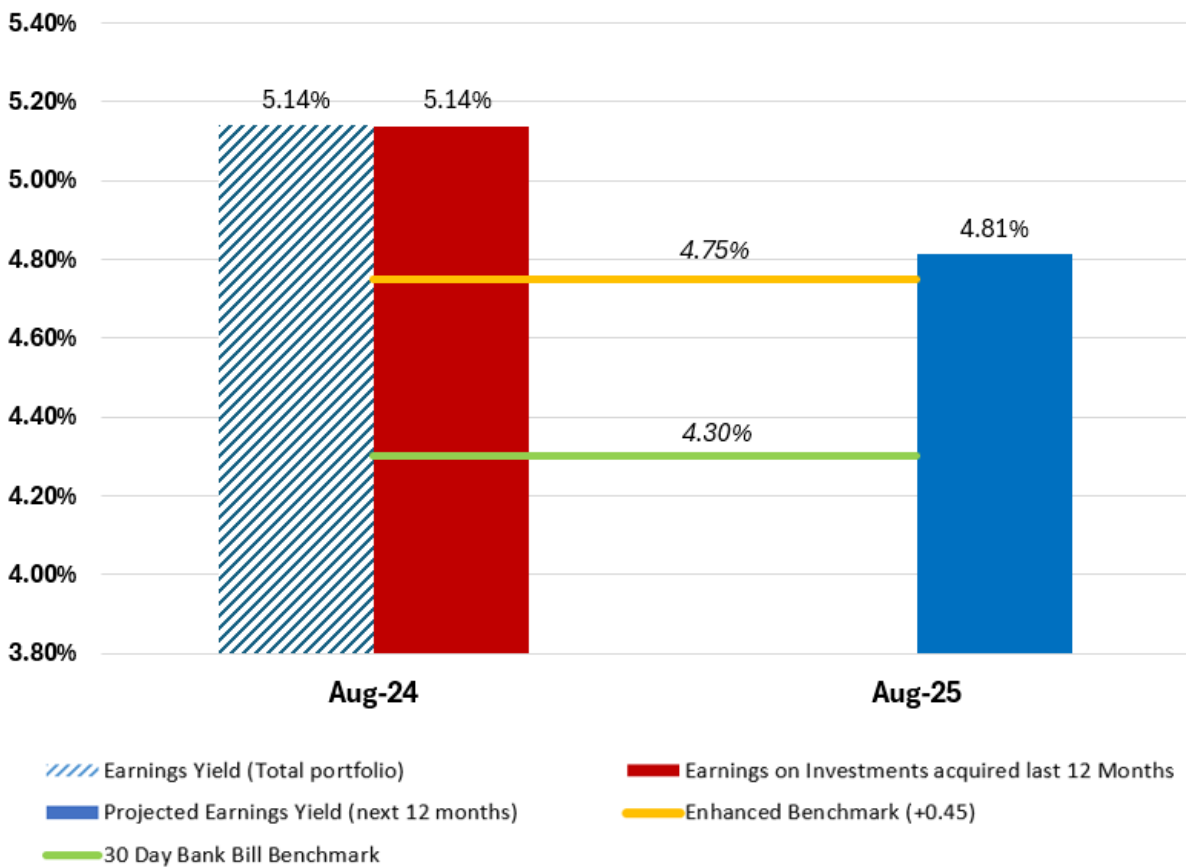

In addition, the City has utilised an additional strategic benchmark rate to measure its investment performance - exceeding the 30 day benchmark returns by at least 45 additional basis points (0.45% p.a.). The 45 basis point increase is based on observed historical average increased credit spreads (or margins) over bank bill rates on offer in relation to 30–90 day investments. The 30-90 bank bill rates represented a reflective benchmark at the time of adoption.

The City's returns from the investment portfolio are in line with cash managed funds in the market. As at August 2024 around 70 per cent of the portfolio, including at call account, is due to mature in the coming year. Past increases to official cash rates have seen improvements in rates of return offered by the market. Most banks anticipate that official rates will stay unchanged until late this year, as long as the downward trend in inflation persists, with possible rate cuts afterward. In August 2024 banks began reducing term deposit rates in anticipation of a cash rate cut from the Reserve Bank of Australia, which is expected to occur in early 2025 calendar year.

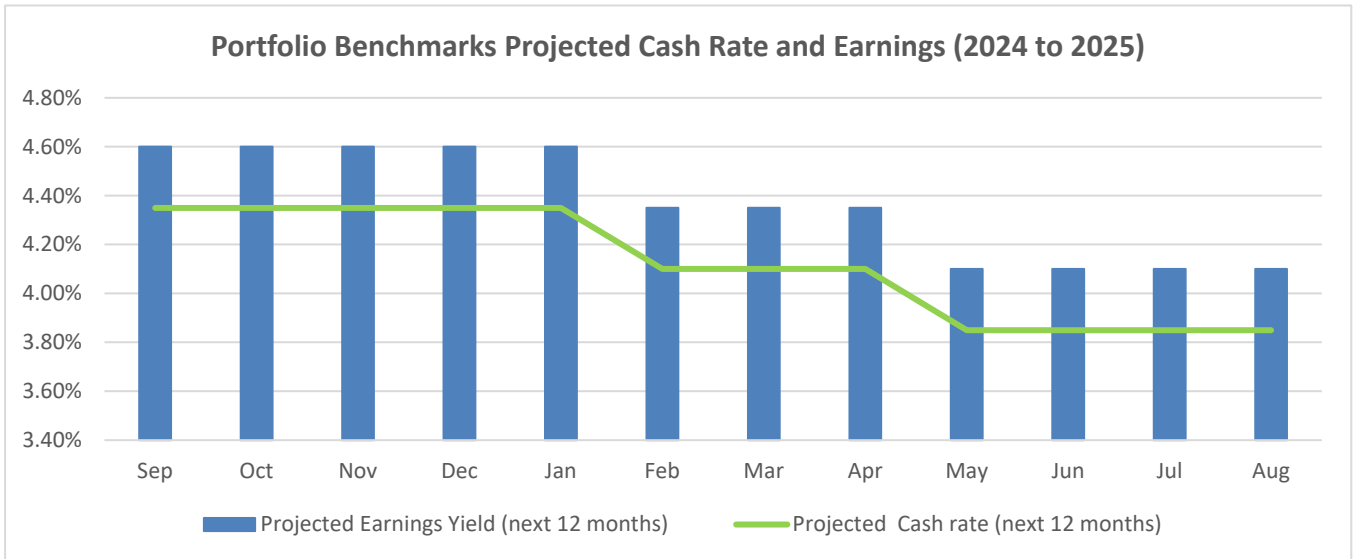

The following chart illustrates how earnings yields may potentially be impacted over the coming year as a result of the above factors. The chart assumes the re-investment of maturing deposits at prevailing rates at the time of writing.

Previous increases in official cash rates led to better rates of return available in the market. However, market expectations suggest that the RBA will first reduce interest rates by 25 basis points in February 2025, followed by three additional cuts by August 2025. This is the first forecast of multiple rate cuts since the Reserve Bank began raising rates in May 2022.

**Portfolio Performance against Benchmarks
Current and Projected (2024 to 2025)**

This trend is anticipated to continue beyond the current financial year which is represented in the chart below. The below chart represents a correlation between the cash rate and projected earnings yield for the next 12 months.

Environmentally and Socially Responsible Investments

The City’s ability to acquire environmentally and socially responsible investments within the current investment and policy environment remains limited, as:

- the structure of many of these investments remains prohibited under the current Ministerial Investment Order; and
- excess demand for environmentally and socially responsible investments has reduced market rates of return on these products.

The City will, however, continue to explore opportunities for supporting environmentally and socially responsible investments within these constraints. The investment climate is changing over time and the City notes that many large scale renewable projects are expected to evolve, which may result in additional sustainable investment offers in the medium to long term. The City has continued to strive to acquire environmentally and socially responsible investments, but opportunities to invest further are constrained by market conditions, particularly the credit rating of investments and associated investment limits under the City’s Investment Policy. The City will continue to encourage and give preference to these investments where they comply with the Ministerial Investment Order and satisfy Council’s policy and investment objectives.

In an increasingly volatile world, it should be noted that the investment policy continues to contain provisions that encourage environmentally and socially responsible investments (SRI) and seek to avoid investments in environmentally and socially harmful activities.
