**NOTE**  
This planting plan is indicative only of a potential full sun vertical garden in Sydney. In-depth assessments of inherent exposures and refinement of species selections are required to ensure sustainable outcomes are generated.

Species selections and are not akin to terrestrial gardens, rather placing an emphasis on epiphytic and lithophytic species with inherently evolved adaptations to survive and thrive on the vertical plane.

This is a hybrid selection of trialed and tested species inclusive of a minority terrestrial species.

Species selection and array go hand-in-hand pending function.
